

MTB Relay Instructions

Please follow these instructions to ensure optimum performance from your ChronoTrack timing tag.

Each relay team will receive a race number with a timing tag attached. Each relay team member will use a number holder.

The team's timing tag is already attached to the back of your team's race number, ready to insert in the number holder.

1. Attach holder to MTB: 2x ties on handlebars, 1x tie on cable

2. Insert your team's race number in the holder of your team's active rider.

3. **Ensure race number is fully inserted and horizontal** as shown. **Your time will not be recorded if your number is not horizontal**

4. When your lap(s) is/are completed remove the race number and pass to the next team member

Please do not remove your number *before* you cross the timing lines as your time will only be recorded if your race number is in your holder when you cross the timing lines.

Please do not fold your race number or attempt to remove your timing tag from your team's race number. *If you fold or crease the tag no times will be recorded.*

Please do not cut or alter the timing tag or race number. *If you ignore this request no times will be recorded.*

If you need help please see a timing official for assistance.
